

Hoon Hian Teck

**Professor of Economics
Associate Dean
School of Economics
Singapore Management University**

Degrees

Ph.D. (obtained with distinction), Columbia University, 1990
M.Phil., M.A., Columbia University, 1989, 1988
B.Soc.Sci. (Hons), B.Sc., National University of Singapore, 1984, 1983

Previous Positions Held

Associate Professor of Economics, Singapore Management University (July 2001-June 2007); Adjunct Associate Professor, National University of Singapore (January 2002-June 2007); Senior Tutor (1984-1990), Lecturer (1991-1994; Tenured in 1993), Senior Lecturer (1994-1998), and Associate Professor (1999-June 2001) at the National University of Singapore; Sub-Dean, Faculty of Arts and Social Sciences, National University of Singapore (1995-1996; 1998-June 2001)

Visiting Positions

Visiting Research Scholar, Kelley School of Business, Indiana University (May 1997-April 1998)
Visiting Research Scholar, John F. Kennedy School of Government, Harvard University (September-December 1999)
Visiting Research Scholar, Department of Economics, Columbia University (April-November 2001); concurrently Fulbright Research Scholar (August-October 2001)

Awards

National University of Singapore Overseas Graduate Scholarship, 1986-1990
Winner of Teaching Excellence Award, Faculty of Arts and Social Sciences, NUS, 2000
Recipient of Fulbright Research Scholarship, 2001
Lee Kuan Yew Research Fellow, SMU, 2002

Teaching and Research Areas

Macroeconomics, International Economics, Development and Growth

Current Research Interests

A two-sector analysis of the effects of productivity growth in information-technology industries on the natural rate of unemployment

Analysis of the links among share prices, the real exchange rate, and structural unemployment in non-monetary open economies

Study of inflation targeting in models with an endogenous natural rate of unemployment

Study of entrepreneurship and financiership in modern economies

Study of the link between growth and unemployment as well as the effects of the tax structure on equilibrium unemployment and wages

Study of the influence of international linkages in the determination of jobs and wages

Analysis of the influence of international flows of foreign talent on economic growth

Analysis of policy dilemmas and policy-making in the age of globalization and skill-biased technological change

Study of Singapore's economic growth beyond the balanced-growth path

Study of various economic problems of the Singapore economy: social security, social safety nets, determinants of long-run growth, wage determination, and international as well as regional economic integration

Membership in Professional Organizations

Member, Economic Society of Singapore

Member, American Economic Association

Member, Royal Economic Society

Publications

Books

Research Monographs

- 1 Collaborator with George Kanaginis and Gylfi Zoega in Edmund S. Phelps, *Structural Slumps: The Modern-Equilibrium Theory of Unemployment, Interest and Assets*, Cambridge, Mass.: Harvard University Press, 1994, 420 pp.
- 2 *Trade, Jobs and Wages*, Cheltenham, UK and Northampton, Mass.: Edward Elgar Publishing, 2000, 207 pp.

Textbook

- 1 *Economics: Theory and Applications*, with Ai Tee Koh, Anthony Chin and Euston Quah, Singapore: McGraw-Hill, 1998, 398 pp.

Edited Book

- 1 *Development, Trade, and the Asia Pacific: Essays in Honour of Professor Lim Chong Yah*, editor with Basant Kapur and Euston Quah, Singapore: Prentice-Hall, 1996, 591 pp.

Journal Articles and Chapters in Books (organized by fields)

Macroeconomics

- 1 “Open Economy Real Business Cycle Models” in Euston Quah and Anthony Chin (eds.), *Selected Surveys in Modern Economics*, Singapore: McGraw Hill, 1990.
- 2 “Macroeconomic Shocks in a Dynamized Model of the Natural Rate of Unemployment”, with Edmund S. Phelps, *American Economic Review*, Vol. 82, no. 4, 1992, pp. 889-900. (Reprinted in *The Economics Of Unemployment*, volume 3, edited by P.N. Junankar under The International Library of Critical Writings in Economics series published by Edward Elgar Publishing, Northampton, Mass., 2000.)
- 3 “Defense Spending Cutbacks and Real Interest Rates in the Neoclassical One-Sector and Two-sector Models”, *Economics Letters*, Vol. 39, 1992, pp. 443-448.
- 4 “The impact of Fiscal and Productivity Shocks on the Natural Rate of Unemployment in a Two-Country World”, with Edmund S. Phelps, in H. Frisch and A. Worgotter (eds.), *Open-Economy Macroeconomics*, London: Macmillan, 1993. (Paper originally presented at International Economic Association Conference, May-June 1991, Vienna, Austria.)
- 5 “Efficiency Wages and Economic Growth”, *Economics Letters*, Vol. 42, 1993, pp. 201-208.
- 6 “Economic Effects of Work Sharing in a Dynamic Labor-Turnover Model”, *Rivista di Politica Economica*, Vol. 11, 1994, pp. 103-123. (Also published by the same title in M. Baldassarri, L. Paganetto and E. S. Phelps (eds.), *Equity, Efficiency and Growth: The Future of the Welfare State*, New York: St Martin’s Press, 1996.)
- 7 “Macroeconomic Shocks and the Endogenous Response of the Stock Market and Real Interest Rates in a Neoclassical General-Equilibrium Model”, with Kong Weng Ho, *Economic Modelling*, Vol.12, no. 1, 1995, pp.28-34.

Research summary

A major theme in Hian Teck Hoon’s research grew out of his PhD work done under the supervision of Professor Edmund Phelps, McVickar Professor of Political Economy, and Professor Ronald Findlay, Ragnar Nurkse Professor of Economics, at Columbia University. Professor Phelps was then revising his views about the determinants of unemployment, largely spurred by his interest in explaining the steady rise of European unemployment without apparent disinflation. Hoon worked on reformulating the labor-turnover model of the natural rate of unemployment to pay attention to dynamics, providing a general-equilibrium characterization of the economy’s response to various economic shocks. This work was published as “Macroeconomic Shocks in a Dynamized Model of the Natural Rate of Unemployment”, with Edmund S. Phelps, *American Economic Review*, Vol. 82, no. 4, September 1992, pp. 889-900. A 1997 paper with Phelps, “Growth, Wealth and the Natural Rate: Is the Jobs Crisis a Growth Crisis?” *European Economic Review (Papers and Proceedings)*, Vol. 41, May 1997, pp. 549-557 studied the influence of a change in the trend growth rate of productivity on the natural rate. The consequences of a low-wage employment subsidy scheme in a model of the natural rate are examined in “Low-Wage Employment Subsidies in a Labor-Turnover Model of the `Natural Rate”, with Edmund S. Phelps, in Edmund S. Phelps (ed.), *Designing Inclusion: Tools to Raise Low-End Pay and Employment in Private Enterprise*, Cambridge: Cambridge University Press, 2003.

In “Future Fiscal and Budgetary Shocks,” *Journal of Economic Theory*, Vol. 143, no. 1, November 2008, pp. 499-518, Hoon and Phelps study the effects of future tax and budgetary shocks in a non-monetary and possibly non-Ricardian economy populated by Phelps-Winter customer-market firms. This paper shows that present concerns about future fiscal and budgetary overhangs that do not directly affect technological possibilities might nonetheless depress present asset prices and contract employment through the adverse shifts of labor demand via higher price-cost markups. This paradox of reduced activity through announcement of future “stimulus” does not hinge on an upward jump of long interest rates. An effort at reconstructing open-economy macroeconomics based upon customer-market frictions and used to analyze the behavior of share prices, real exchange rates and output in three historical episodes is attempted and compared to Keynesian and real-business-cycle analyses in Hoon and Phelps, 2007, “A Structuralist Model of the Small Open Economy in the Short, Medium and Long Run,” *Journal of Macroeconomics*, Vol. 29, June, pp. 227-254.

As a specialist also in the area of trade, Hoon noticed that although trade models allowed one to analyze the general-equilibrium welfare effects of opening up to international commerce as well as the effects of cross-border shocks, it was striking that, in standard formulations, there was never an influence of trade on joblessness while ironically politicians often seek to convince the public to support a particular trade initiative on the ground that it creates so many numbers of jobs. Hoon then added a new theme to his research, reworking trade theory to embed trade effects on an endogenous natural rate of unemployment. An early paper that showed how trade affected structural unemployment in a Heckscher-Ohlin two-country setting (his Asia-America model) is “Comparative Advantage and the Equilibrium Rate of Unemployment”, *Economics Letters*, Vol. 37, 1991, pp. 229-304. A more complete analysis is provided in “Adjustment of Wages and Equilibrium Unemployment in a Ricardian Global Economy”, *Journal of International Economics*, Vol. 54 (1), June 2001, pp. 193-209. There, it is shown how a collapse of world trade due to protectionist barriers can lead to a world-wide depression with a rise of structural unemployment. An effort to test the theory of an endogenous natural rate of unemployment in a pure trade model is found in “Trade, Capital Accumulation and Structural Unemployment: An Empirical Study of the Singapore Economy”, with Hiau Looi Kee, *Journal of Development Economics*, Vol. 77, no. 1, pp. 125-152, 2005. Hoon also provided a book-length treatment of this subject in a book entitled *Trade, Jobs and Wages* (Northampton, Mass., Edward Elgar Pub. Co., 2000).

In collaborative work with Kong Weng Ho, a quantitative exercise was conducted to account for the sources of the growth of Singapore’s real GDP per worker using a dataset available from the Singapore Department of Statistics and other OECD data. This growth accounting exercise made explicit the channels through which Singapore benefits from international R & D spillovers. We find that 61.5 percent of Singapore’s real GDP per worker growth over the 1970-2004 period is due to multifactor productivity growth. More specifically, 52.1 percent of the growth is explained by an increase in the effectiveness of accessing ideas through improvement in Singapore’s educational quality as well as increases in machinery imports and foreign direct investment from the G5 countries. This work is reported in “Growth Accounting for a Technology Follower in a World of Ideas: The Case of Singapore”, with Kong Weng Ho, *Journal of Asian Economics*, Vol. 20, no. 2, pp. 156-173, 2009 [available at <http://hthoon.googlepages.com/growth-accounting-D48.pdf>].

Work in Progress

Book Manuscripts in Preparation

Catching The Next Wave: How the Singapore Economy Grew and Its Future Prospects, Singapore: McGraw-Hill.

Principles of Economics textbook, *Economics*, Singapore: McGraw-Hill. (Joint with Kong Weng Ho)

An intermediate-level undergraduate textbook, *Macroeconomics*, Singapore: McGraw-Hill. (Joint with Kong Weng Ho)

Articles

- 1 “Effects of Technological Improvement in the ICT-Producing Sector on Business Activity”, with Edmund S. Phelps --- It seems to be taken for granted by many commentators that the sharp decline in prices of computers, telecommunications equipment and software resulting from the technological improvements in the information and communications technology (ICT)-producing sector is good for jobs and is a major driving force behind the non-inflationary employment miracle and booming stock market in the latter half of the nineties in the U.S. and their recurrence since 2004. We show that, in our model, a technical improvement in the ICT-producing sector by itself cannot explain a simultaneous increase in employment and a rise in firms' valuation (or Tobin's Q ratio). The key to generating a booming stock market alongside employment expansion is to hypothesize that when technical improvement in the ICT-producing sector occurs, the market forms an expectation of future productivity gains to be reaped in the ICT-using sector. Then we can explain not only the stock market boom and associated rise in investment spending and employment in the period 1995-2000 but also the subsequent decline in employment, in Tobin's Q and in investment spending in 2001, with consumption holding up well as productivity gains in the ICT-using sector were realized. An anticipation of a future TFP improvement in the ICT-using sector can once more play the role of raising the stock market.
- 2 “A Model of International Wage Convergence Based on Multi-Plant Foreign Direct Investment”, with Irene Ng --- This paper builds upon an empirically satisfying and theoretically well-founded notion of multi-plant cost advantage to explore how industrialization can take place through international investment. One of our findings is that, given the factors determining the North-South wage gap, the measure of efficiency or quality of social infrastructure of the South must not fall too far behind that of the North if it is to attract foreign direct investment (FDI). Another finding is that developing countries that choose to integrate themselves into the international trading system are good candidates for the inflow of multi-plant FDI. In this role, trade serves as the ‘handmaiden of growth’.
- 3 “Catch-Up Growth Based on International Talent Mobility in an Idea-Based World”, with Quan Yu --- This paper develops formally how immigrants’ ties of talented people to their home countries can play a key role in technology diffusion from world technological leaders to developing countries. The aspect of immigrant ties we focus on is knowledge spillovers through various programs of academic exchange to draw upon the expertise of individuals who have relocated. We show that when this externality effect is sufficiently strong, there is a phase of growth during which a “reverse” brain drain naturally occurs. Our

model's prediction is consistent with the experience of Taiwan, which saw a reverse flow of talented people during the 1980s.

- 4 "Service Links and Wage Inequality", with Kong Weng Ho --- We develop a general-equilibrium framework to study how the degree of specialization of service links is tied to the extent of production fragmentation in the manufacturing sector. In an open-economy extension, we show how changes in the fixed and variable costs of service providers affect the degree of international outsourcing in component production in manufacturing. We also study the implications for the skilled-unskilled wage gap.

Research Grants

SMU-sponsored research project conducted in collaboration with Edmund S. Phelps, Effects of a Delayed or Immediate Tax Cut on Employment and Asset Prices, 2002-03.

SMU-sponsored research project conducted in collaboration with Edmund S. Phelps, A Two-Sector Analysis of the Effects of Productivity Growth in Information-Technology Industries on the Natural Rate of Unemployment, 2003-04.

SMU-sponsored research project conducted in collaboration with Edmund S. Phelps, An Analysis of Overinvestment in the Ramsey One-Sector Model and the Uzawa-Two-Sector Model of Economic Activity, 2005-06.

SMU-sponsored research project, Endogenous Comparative Advantage and Job Creation, 2008-09.

Co-investigator in research project on Entrepreneurship and Innovation in Capitalist Systems (Principal Investigator: Edmund S. Phelps) funded by Kauffman Foundation, 2004-07.
